

# GREECE METEORA AND ATHENS

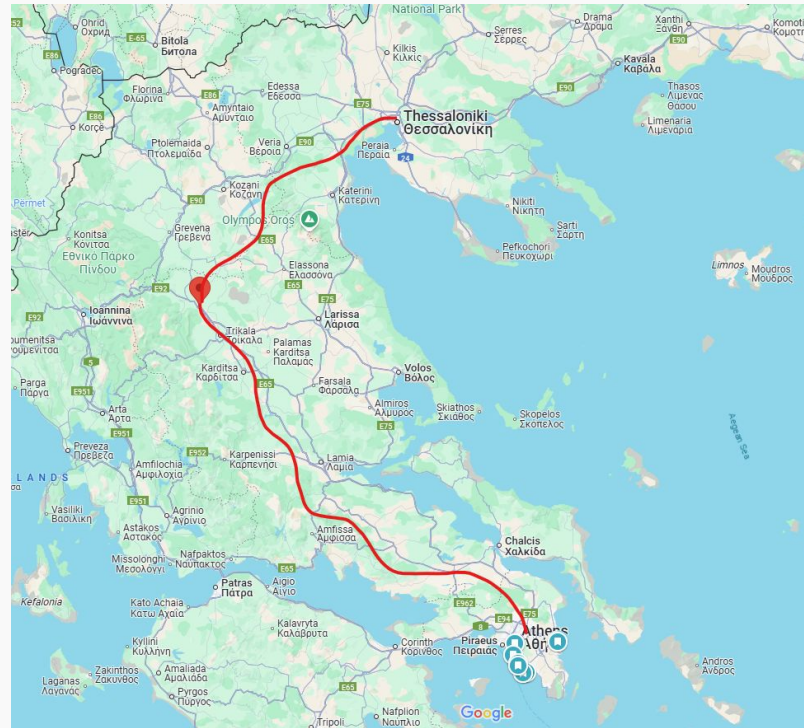

CVEN 311 FLUID DYNAMICS  
SADIE KRUPA

# THESSALONIKI TO ATHENS

We traveled from  
Thessaloniki to Athens,  
stopping in Kalampaka  
to hike Mt. Olympus and  
explore Meteora before  
arriving in the capital  
city.

# KALAMPAKA & MT OLYMPUS

Kalampaka was a cozy little mountain town with incredible scenic views and great food.

The hike of Mt. Olympus was breathtaking and one of my favorite parts of our trip!

# METEORA - MONASTERIES IN THE SKY

The monasteries were tucked away in the mountains of Meteora where they sat atop the tall boulders.

I thought it was very interesting to see structures like these hold up so well given the time and environmental conditions.

# ATHENS

Can now check seeing the Acropolis off the bucket list!

Something cool I learned was that one of the statues in the Acropolis Museum was missing because it was stolen!

I loved hearing from the professors about how the museum was built to sustain the earthquakes using new technology in structural engineering.

# I ♥ STUDY ABROAD

This trip deepened my appreciation for culture, history, and the beauty of Greece. I would highly recommend this study abroad program to engineering students at Texas A&M looking for a once in a lifetime experience. Thank you Paco!
